

Available in 6 lb., 10 oz. and 30 lb., sizes.

# EQUINE CHELAMIN™

A NATURALLY CHELATED ORGANIC TRACE MINERAL COMPLEX designed to enhance and augment the nutritional value of hay/pasture feeds for foals, breeding, performance, and maintenance stock.

Net Wt. 6 lbs. (2.7 kg.)

Chelamin is a natural 74 trace mineral supplement derived from a unique ancient geological formation of composted dried seaweed meal, algae meal, and diatomaceous earth.

The combination of these unique, natural ingredients makes Equine Chelamin a comprehensive source of vitally important trace minerals as they occur in nature. Its trace minerals are synergistic with each other and chelated (combined) with organic molecules. Mineral chelates occur naturally in foods, and are the form that best facilitates mineral absorption.

Over time, with deforestation and intensive farming practices, soils from which foods are derived have been dangerously depleted of trace minerals. Nitrogen, phosphorous, and potassium (NPK) fertilizers fail to restore to the land the equivalent of what is taken. Equine Chelamin permits supplementation of a naturally occurring trace mineral complex without having to resort to purified single minerals in arbitrary dosages.

**INGREDIENTS:** Dried Seaweed Meal, Algae Meal, and Diatomaceous Earth.

**DIRECTIONS FOR USE:** Sprinkle over daily feed. In some cases, lightly dampening the food will increase acceptance. 1 oz. = 2 Tbsp.

**ADULT HORSES:** Feed 4 oz. per day for the first month, 2 oz. per day for the second month, and 1 Tbsp. per day from the third month forward. Highly active horses should be on a maintenance dose of 1 oz. per day.

**FOALS:** Feed 1/2 tsp. per day. This dose should gradually increase to the adult dosage of 1 Tbsp. per day.

**CYCLING:** In some instances favorable results have been obtained by giving Chelamin for 5 days and desisting for 2 as a routine cycle.

STORE COVERED CONTAINER IN A COOL, DRY PLACE  
OR REFRIGERATE
