Vitamin A	Not Less Than	3500 IU/lb.
Moisture	Not More Than	10.0%
Ash	Not More Than	6.0%
Added Minerals	Not More Than	4.0%

Feeding Directions:

Wysong Equine Diet™ is specifically designed to supplement horses being fed pasture or hay.

- The average daily maintenance level of Wysong Equine Diet™ is 1/4 pound per 100 pounds of body weight.
- Lactating, gestating, working, racing, rapidly growing, debilitated or older horses may require higher levels to meet their metabolic needs. Levels of Wysong Equine Diet™ up to 1-1/2 pounds per 100 pounds of body weight per day may be fed to mature horses intermittently without providing potentially harmful excesses of vitamins or minerals.
- Wysong Equine Diet™ is ideal for the older horse that is a "hard keeper" and any other horse that requires an energy-dense source of nutrients. Wysong Equine Diet™ is also suited for use as a fitting feed for sales of yearlings and show horses since its fat content will result in an added body condition and improved hair coat.
- Wysong Equine Diet™ should be fed in conjunction with a clean, high quality pasture or hay. Intake should equal approximately 1% of the horse's body weight daily.
- Do not feed additional vitamins or minerals unless advised by a veterinarian.
- Do not overfeed. Adjust feeding levels to maintain ideal body weight.

Net Wt. 50 lbs. (22.6 kg)
